

North Carolina Heat Report

September 5 – September 11, 2021

This Week

- ☀ Daily maximum heat indices ranged from 77°F to 99°F (median = 86°F) at Raleigh-Durham International Airport (RDU)
- ☀ 55 emergency department visits for heat-related illness were observed (Figure 1)
 - ☀ 73% of visits were for males, most were between ages 45 and 64.
 - ☀ The most frequent heat related diagnosis code was Heat Exhaustion (Table 2)
 - ☀ Most visits were seen in hospitals in the Piedmont (47%) and Coastal (44%) regions
 - ☀ 15% of visits were seen in hospitals in the Sandhills sub-region¹
- ☀ This week the proportion of emergency department visits for heat-related illness was 0.06%, similar to the historical average (Figure 2)

Season to Date (September 2021)

- ☀ 3023 emergency department visits for heat-related illness have been identified (Figure 1)
- ☀ Common activities preceding illness are working outdoors and recreation

Figure 1. Emergency Department Visits for Heat-Related Illness and Maximum Heat Index -- North Carolina, May 1- September 11, 2021

Source: NC DETECT Data and State Climate Office at NC State University
 Max Heat Index is for Raleigh-Durham International Airport (RDU). NC Average Max Heat Index is for emergency department visit location.

¹The Sandhills sub-region is comprised of the following counties from the Piedmont and Coastal regions: Bladen, Cumberland, Harnett, Hoke, Lee, Montgomery, Moore, Richmond, Robeson, and Scotland.

Table 1. Visits by sex and age group -
September 5 – September 11, 2021

	N=55*	(%)†
Sex		
Male	40	(73)
Female	15	(27)
Age		
0-14	2	(4)
15-18	4	(7)
19-24	3	(5)
25-44	17	(31)
45-64	17	(31)
65+	12	(22)

*n may vary from weekly total visits † may not total 100 due to rounding ‡ missing severity data =24 § definitions of heat related illness categories <https://www.cdc.gov/niosh/topics/heatstress/heatrelatedillness.html> || other effects include heat fatigue, heat edema, other effects of heat and light, and other effects unspecified

NOTE: Emergency department visit records and maximum heat indices were obtained from NC DETECT and the State Climate Office at NC State University, respectively. Heat-related illness is captured through a near real-time keyword search for 'heat', 'hot', 'hyperthermia', 'heat cramp', 'heat exhaustion', 'heat stroke', and 'sun stroke' in chief complaint or triage notes of emergency department records or a diagnosis code for heat-related illness. These figures present an estimate of the number of emergency department visits for heat-related illness. Please contact lauren.thie@dhhs.nc.gov for more information.

Table 2. Visits by severity –
September 5 – September 11, 2021

	N=31‡	(%)†
Severity§		
Heat Exhaustion	20	(65)
Heat Syncope	5	(16)
Other Effects	6	(19)

**Figure 2. Percent of Total Emergency Department Visits for Heat-Related Illness
-- North Carolina, 2021 Compared to Historical Average**

*Data begins 05/01/2015 to 2021 reporting period. Week ending dates may vary by a few days for earlier years. For data week definitions see <https://www.cdc.gov/nndss/downloads.html>. Hospitals transitioned from the ICD-9-CM diagnosis code standard to ICD-10-CM in 2015. This transition may impact the number of emergency department visits with a heat related illness diagnosis.
